Education

Dr. Ambedkar Institute of Technology (Dr. AIT))

Bangalore, Karnataka - India

Masters In Computer Application

2024 – 2026

CGPA [8.33]

Experience

Edureka Learning Center, Belagavi

Apr 2024 – may-2024

Full Stack Web Development Intern

Worked on developing and maintaining full-stack web applications using HTML, CSS, JavaScript, backend technologies, and MySQL. Gained hands-on experience in frontend and backend integration, responsive design, and database management while collaborating with mentors to improve coding practices and application performance.

Projects [More at github.com/PriyaraniSuramanji]

Weather App — Django, Python, REST APIs

~ <https://github.com/PriyaraniSuramanji/Weather-App>

A Django web app that fetches and displays real-time weather data with city search, forecast view, responsive dashboard, and a 40+ page project report detailing architecture and testing.

Online Banquet Management System [OBMS]

~ <https://github.com/PriyaraniSuramanji/Online-Banquit-Management-System>

HTML, CSS, JavaScript, PHP, MySQL

A web-based system for managing banquet bookings, customer details, and payments with a connected MySQL database.

Disease Prediction from Symptoms

~ https://github.com/PriyaraniSuramanji/Disease_Prediction-

Python, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn

A machine learning-based system that predicts diseases based on user-input symptoms by training and testing classification models, with visualization support and symptom–disease mapping for better analysis.

Student Management System

~ <https://github.com/PriyaraniSuramanji/Student-Management-System>

A project intended to manage student data and related administrative tasks of an educational institution (student records, course/attendance/grades tracking etc.), following the concept of a “student information system” to simplify data handling and institutional operations.

Certifications

React.js

Edureka Learning Center, Belagavi (2024)

Learned the basics of React.js such as creating components, using JSX, handling props and state, and building simple interactive web pages.

Skills

Python: Comfortable with scripting, data analysis using Pandas/NumPy, and building small web apps with Django.

Web Development: Frontend with HTML, CSS, JavaScript; Backend with Django; experience in ReactJS basics.

Databases: Knowledge of MySQL, SQLite; able to design and manage relational databases.

Cloud Computing (AWS Concepts): Understanding of VPC, subnets, routing, load balancing, IPs, security groups, and VPNs.

Version Control: Proficient with Git and GitHub for collaboration and project management.

Data Visualization: Able to use Matplotlib to create plots, charts, and visual reports.

Machine Learning (Beginner): Familiar with simple models like KNN and Naïve Bayes.

Problem Solving: Comfortable with debugging, writing clean code, and optimizing logic.

Soft Skills: Team collaboration, documentation, and mentoring peers in coding.
